

ADITYAVIR SINGH RANDHAWA

Product Manager | AI/ML Products | Cross-Functional Delivery

Patiala, Punjab, India | adityavir0025@gmail.com | +91 9779433125 | [Adityavir Randhawa](#) | [blackwoodtech.in](#)

SUMMARY

Product Manager and Computer Engineering student with experience owning products end to end, from requirements gathering and planning through cross-functional execution and delivery. Background managing multiple concurrent AI product initiatives, including scope definition, timeline planning, resource coordination, stakeholder communication, and risk management. Experienced in AI and multi-agent system products, including evaluation, reliability, and human oversight requirements.

EDUCATION

B.Tech, Computer Engineering — Thapar Institute of Engineering and Technology (TIET), Patiala *Expected 2027*

Diploma, Computer Science - Thapar Polytechnic College, Patiala

PRODUCT & PROJECT MANAGEMENT EXPERIENCE

Founder and Product Lead — Blackwood Technologies Private Limited

Aug 2026 - Present

- Manage product strategy and delivery across three concurrent AI product initiatives (CerebX, Nexus, ATHENA), setting priorities, scope, timelines, and resource allocation as the primary decision-maker.
- Gather and document requirements from ambiguous problem statements, converting them into scoped project plans, user workflows, and phased delivery schedules for engineering teams.
- Plan and manage discovery-to-launch project cycles independently, including problem framing, market research, task sequencing, milestone tracking, and stakeholder reporting.
- Align cross-functional work between research, engineering, and design activities, tracking dependencies and resolving blockers to keep projects on schedule.
- Use AI coding agents and automation tools to plan and accelerate prototyping and repetitive project workflows, reducing delivery time from idea to working prototype.

PROJECTS

CerebX — *Sovereign Multi-Agent Cybersecurity Platform*

- Managed requirements gathering, scope definition, and delivery planning for a hierarchical, multi-tier-failover system for air-gapped and high-security customers.
- Coordinated technical and compliance requirements into a documented project plan, workflow diagrams, and a feature roadmap.

Nexus — *Custom AI Models Trained on Client Data*

- Planned and tracked an end-to-end project spanning data ingestion, training, fine-tuning, and deployment across cloud, on-premise, and air-gapped environments.
- Owned scope and sequencing across environment-specific deployment requirements, aligning milestones between workstreams.

Agrosense — *AI-Assisted Platform for Farmers*

- Oversaw project scope for a multi-sided platform combining government soil and weather data, personalized recommendations, a marketplace, and a community layer.
- Planned delivery phases and prioritized features across multiple user groups (farmers, marketplace vendors, community contributors).

SABER — *Specialist Agent Based Expert Reasoning*

- Managed the project plan for a hierarchical multi-agent reasoning system, including task sequencing, milestone tracking, and resourcing.
- Directed the build of a custom multi-domain evaluation suite and used results to prioritize the project roadmap, achieving measurable gains over baseline.

ATHENA — *AI Governance & Decision-Support Research*

- Led requirements and project scope for an AI governance and decision-support tool, setting verification and auditability as mandatory project constraints.
- Synchronized research and documentation milestones and tracked project risks throughout development.

Wireless Sensing Bandage for Chronic Wound Monitoring — *Academic Research*

- Steered the research project plan for a wireless sensing bandage monitoring wound-site parameters (pH, temperature, moisture, bioimpedance) without dressing removal.
- Compiled an author-wise literature comparison table to structure the research review milestone.

Red Vector AI — *AI-Powered Offensive Security & Attack Simulation Platform*

- Designed a controlled AI-driven attack simulation product for enterprise clients, enabling systems to be tested against realistic adversarial scenarios to surface vulnerabilities and risk areas.
- Defined the audit and reporting framework used to isolate identified weaknesses and translate findings into prioritized remediation guidance for client security teams.

WRITING

- Founder and writer, The Black Light - geopolitics and macroeconomics publication with an evidence-based, primary-source-driven editorial approach; oversaw editorial planning and publishing schedule.

SKILLS

Product and Project Management: Requirements gathering, project planning, scope management, roadmapping, milestone tracking, risk management, resource coordination, stakeholder communication, cross-functional coordination, prioritization, product strategy, go-to-market planning, user research, competitive analysis, KPI/metrics definition, backlog management, agile/scrum, software development life cycle (SDLC), product lifecycle management, PRD writing

AI/ML Product: Multi-agent systems, RAG, reliability and verification tradeoffs, human-in-the-loop design

Execution: AI-assisted development, workflow automation, Python, distributed systems basics, product strategy
